

MULISPLITTER SAW

The MULTISPLITTER SAW with splitting conveyor has a special design with multiple saws that are working in parallel providing longitudinal cuts.

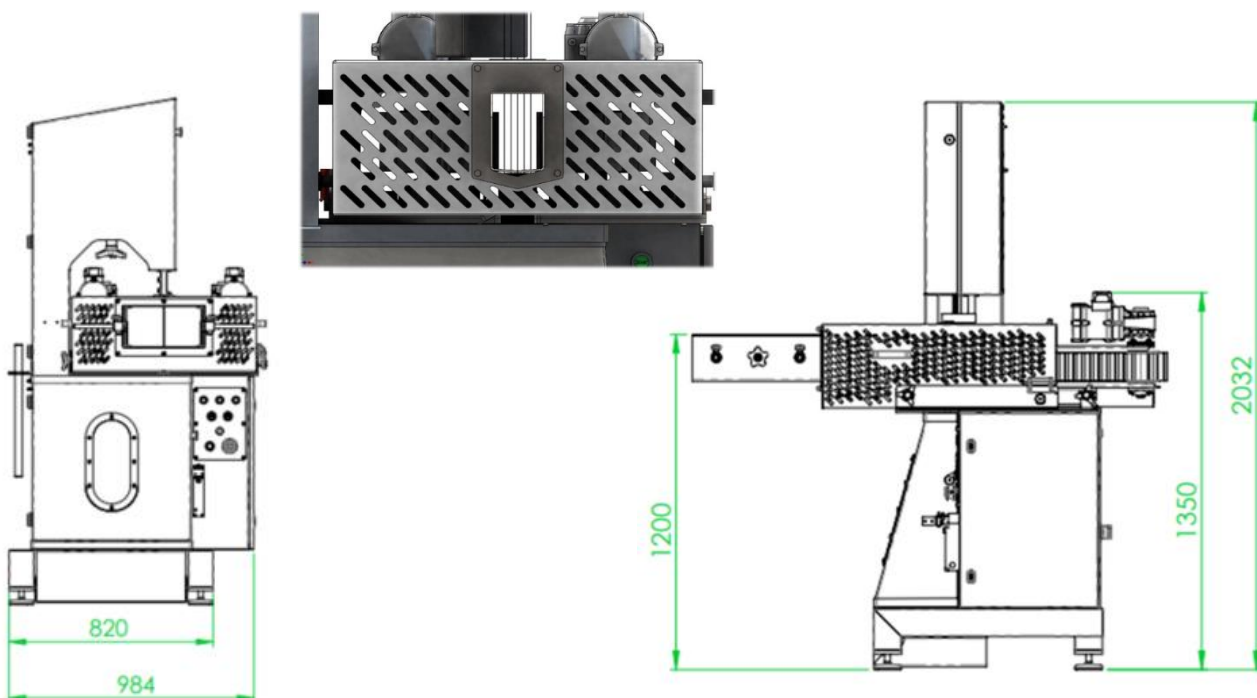

It has been developed to make the cuts safely and quickly.

The machine consists of lateral traction belts or a tunnel, depending on the type of product to be cut.

The MULTISPLITTER stands out for its safety and versatility, it can be customized according to the customer's needs.

It is a continuous cycle machine, compact and easy to use. The operator, who is not specialised, has to introduce the product into the tunnel system and it comes out on the other side cut into multiple pieces.

The MULTISPLITTER SAW is capable of absorbing as many parts as an operator is able to feed into it, so the machine increases production exponentially and eliminates the risk of accidents at work.

ELECTRICAL POWER tunnel 11kW	ELECTRICAL POWER belts 11,5kW
TOTAL SIZE 1500mmLx1500mmWx1900mmH	VOLTAGE 220V III+T or 380-490V III + T
WEIGHT 680Kg
